SUMMARY

Ambitious Software Engineer with 1 year of experience in the field. Skilled in writing code in JavaScript and React. Participated in the development of software system solutions. Looking for a job that will help me become a resourceful and successful professional.

EXPERIENCE

Front-End Developer Intern

Blaise Transit

January 2023 - December 2023, Montreal, QC

- Developed and implemented a color customization feature enabling clients to set brand colours in the app, including creating new endpoints, updating the database schema, and refactoring components for customized colour support.
- Led a successful project converting the codebase to Typescript, resulting in improved code maintainability, enhanced developer productivity, and preventing bugs during development.
- Conducted extensive refactoring and maintenance, resolving over 200 bugs and code smells identified by SonarCloud, resulting in a clean code and a more efficient codebase, enhancing overall system performance and developer productivity.
- Created and maintained over 50 reusable components such as forms, modals, and other UI elements, streamlining development and ensuring consistent design patterns.

Full Stack Developer

Artisan Residential Services

February 2021 - May 2021, Langley, BC

- Designed and developed a modern, user-friendly UI/UX to align with the client's new brand direction, resulting in a 20% increase in website accessibility.
- Created a responsive website using React.js and Bootstrap, supporting all device formats and resulting in improved user engagement and increased traffic.
- Implemented a REST API using Strapi with MongoDB Atlas, improving content management, and reducing content update times by 70%.

Freelance Developer

Artisan Hardwood Countertops

April 2020 - June 2020, Langley, BC

- Redesigned an existing website with a responsive design using Webflow, resulting in a 50% increase in website accessibility.
 - Implemented a content management system using Webflow CMS, streamlining content updates and increasing user productivity by 70%.
-

PROJECTS

SunnySundayBot

May 2022 - May 2022

- Created a Discord bot using Python and BeautifulSoup to parse data from the MapleStory website and notified server members.
 - Deployed locally using Docker on Raspberry Pi, and used in a community of over 500 members.
-
